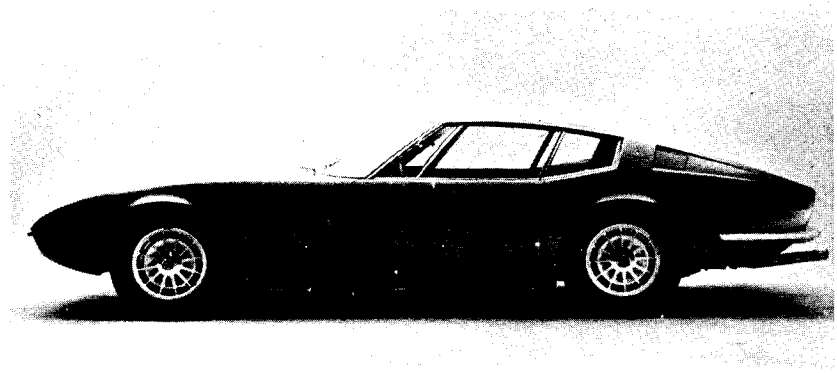
GHIA presents:

"GHIBLI" MASERATI



For Maserati of Modena GHIA has designed and built a 2-seater Coupe on 4.7-liter Maserati chassis; a real high performance automobile.

The line blends Maserati tradition and GHIA style. The grill, which characterizes the car, acts as bumper and incorporates the parking lights. The double self-concealing headlights, are electrically operated. Flashing the headlights is possible, through the grill even when the headlamps are down.

On the side there are two air-intakes behind the wheel-housing. The fender is low and streamlined. The design of the fender is resumed, behind the rear window, by a vent for the exit of the air from the passenger compartment. This vent forms a shallow cavity where the gas tank caps are hidden by a cover.

The wide rear window panel incorporates the wires of an electric defroster. The large trunk can be reached from the interior as well as from the exterior. Behind the seats there are also two additional luggage lockers. The interior has been endowed with all possible comforts: the steering column is adjustable; the seats have a very high and adjustable back. Among the extras, a heater-air conditioner unit, radio, electrically operated windows. The upholstery is in real leather.

Commercial production has already started.

Specifications

Maserati 4.7 liter engine.
Length 4625 mm, width 1780 mm, height 1160 mm, wheelbase 2550 mm.
Max. speed 280 Kmh.
