

OIL PRESSURE GAUGE LINE REPAIR by Walter Loeliger

Following are instructions for a nice, clean replacement of the non-available oil pressure gauge line (old type) as found in 3500GTs, etc.

Use 3611 (92cm) of stainless steel braided Neophrene hose, Aeroquip No. FBA 0400 (1983 price \$15-00). This can be purchased at Wil-Quip 3198D Airport Loop Drive, Costa Mesa. CA 92626 (714) 751-5131, or your nearest Aeroquip dealer.

Hold the old hose in a vise and unscrew the old fittings with a 14mm open end wrench.

Clean all metal parts of old rubber and dirt. Lubricate threads with rubber lubricant or soap and thread in all the way to the new hose using the old sleeve. This gives a clean connection without using ugly clamps.
